Angle Adjustment Mechanism TM-SB0

1. Turn the BeFREE upside down (protect the display)

2. Open the Angle Adjustment Mechanism and place it on the BeFREE in such a way that the holes in the mechanism align with the holes of the BeFREE, as shown on the image

3. Fix the mechanism with the supplied four screws (HEX 3.0)

4. If a handset module is present, mount the supplied plastic feet in the opening at the bottom front part of the BeFREE module (detail A). Plastic feet should point to the front and must latch into the hole.

Operation:

1. To increase the angle lift the rear of BeFREE. There are six steps.

2. For decreasing the angle first move the mechanism to the far top position. This releases the spring and allows the mechanism to return to the initial position. Now the angle can be increased again.
