Angle Adjustment
Mechanism TM-SB0-002

1. Turn the BeFREE upside down (protect the display).
2. Remove the three screws from the configuration indicated by [A]. These will be replaced by longer ones.
3. Place the metal adapter plate [B] on top of the configuration (You can guide the cables through the channel in the metal part [C]
4. Open the Angle Adjustment Mechanism and place it on the adapter plate in such a way that the holes in the mechanism align with the holes of the BeFREE, as shown on the image.
5. Fix the mechanism with the supplied HEX screws [D]
6. Replace the scews removed in step 2 with the supplied longer ones [E]

6. If a handset module is present, mount the supplied plastic feet in the openings at the bottom front part of the BeFREE module [F]. The plastic feet should point to the front and must latch into the hole.

Operation:
1. To increase the angle lift the rear of the BeFREE. There are six steps.
2. For decreasing the angle first move the mechanism to the far top position. This releases the spring and allows the mechanism to return to the initial position. Now the angle can be increased again.
