

## Disable C-State reporting with J1900 CPU

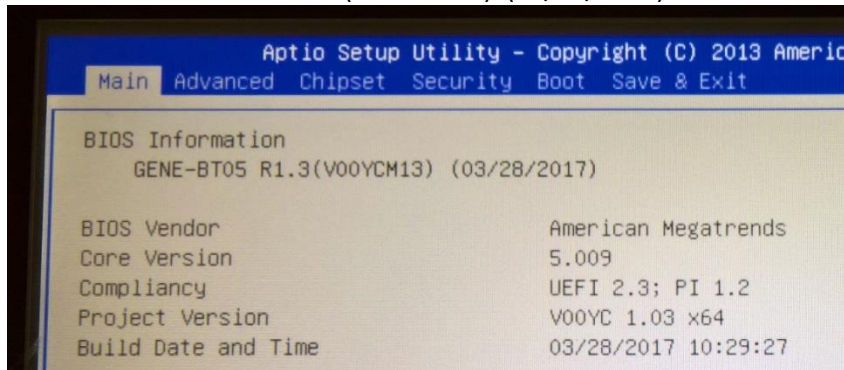

If you experience problems with occasional freezing of the computer with Windows 10, disabling C-state reporting will most likely solve this.

First, make sure you have the correct BIOS version:

BF22: correct

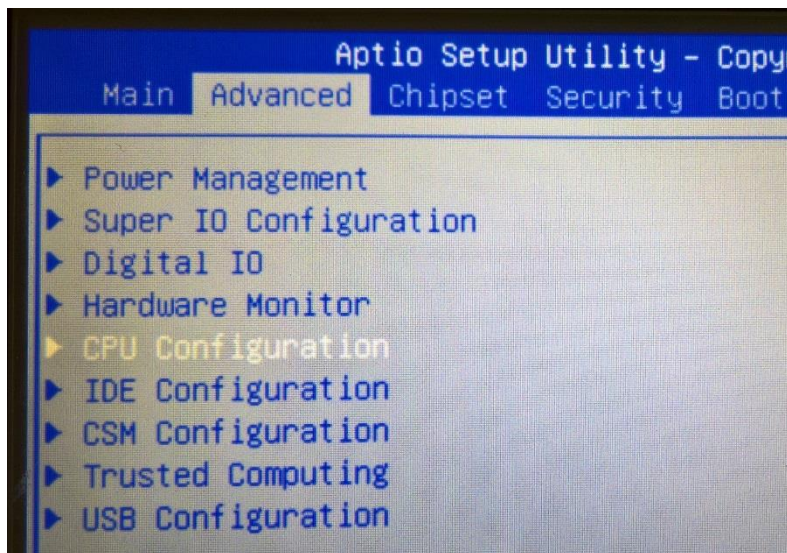

BF10/20:

1. Enter BIOS with <del> when the Tipro logo shows
2. Check version - R1.3(V00YCM13) (03/28/2017):

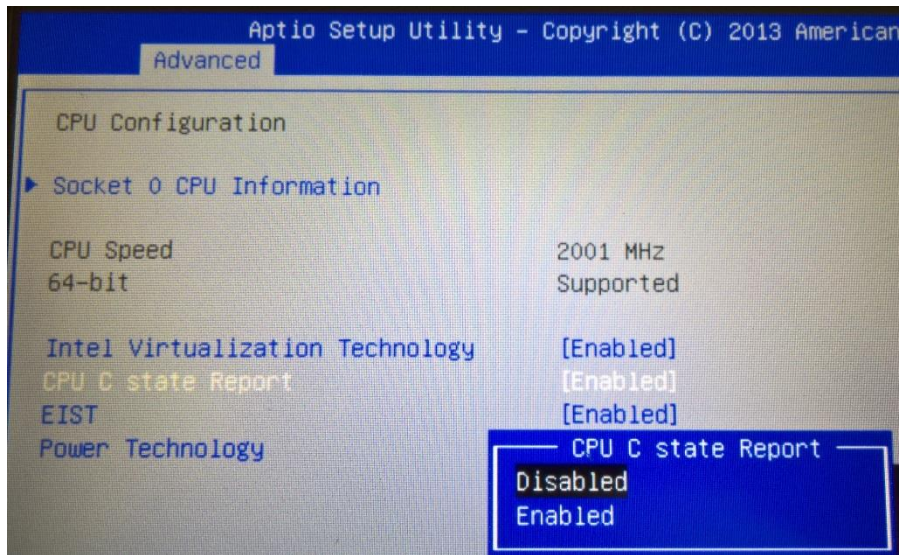

If the version is not correct, please update the BIOS first.

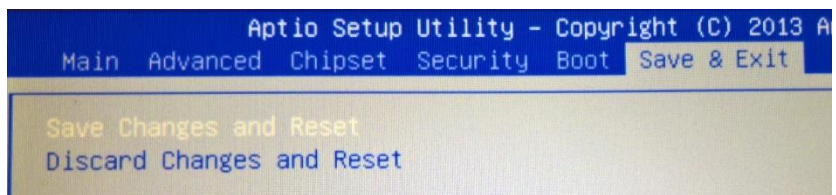

3. Go to menu: Advanced > CPU configuration:

4. Then choose DISABLED for CPU C state report. Leave the rest.

5. Save and exit

Turn off BeFREE
