

Product Update Notification

February 2021

Affected products:

- **BeFREE 07 Touchcomputer Modules** (Ordering Codes BF07-xxx-xxx)

Dear Partners,

Due to Intel transitioning the stepping of the Intel Celeron N3350 processor to F1 we would like to inform you that BeFREE 07 will be affected by this update.

In addition to the new processor stepping, BIOS will also be updated to the latest version but default settings will stay the same.

The change should be transparent to integrators and end-users. All operating system images should work without any change. There will be some driver update activity in the background at first start, but no user intervention or internet connection is needed.

The existing functionality has been completely preserved. The phasing-in process is about to be started while the transition is expected to be completed within the next couple of months. It is going to be entirely seamless to the customers, both logistically (same ordering codes) and commercially (same prices).

In case of any related questions, please feel free to contact us at sales@tipro.si

Sincerely,
