

USB Handset module with PushToTalk/PushToMute function

Features

- Add-on module or standalone device (if a Tipro controller is integrated in)
- Combination of a USB audio device and an HID keyboard (plug&play operation with generic drivers)
- Programmable PushToTalk key and Hook switch
- Two RGB LED status indicators
- Hardware generated side-tone
- Software adjustable volume (loudspeaker and microphone) and side-tone level
- Programmable signal processing includes ambient noise suppression (noise gating), signal compression and limiting
- Analog front-end designed to meet wide-band IP telephony standards
- Integrated acoustic shock protection
- Optional dial-pad in the cradle/base
- Optional HID Gamepad Interface
- Optional analog audio interface (instead of USB) for legacy systems
- Optional analog switching handset version available for combinations with all BeFREEs (except the BeFREE07) or Intercom (automatic switching between hands-free and handset)
